

WHAT IS CLAIMED IS:

1. A case for an electronic device, comprising:
5 a first protective material that maintains said
electronic device within said case; and

10 at least one controlling interface, in electrical
communication with said electronic device, and disposed
on said first protective material, through which said
user can operate an electronic feature of said
electronic device.

15 2. A case according to claim 1, wherein the
electrical communication between said controlling
interface and said electronic device is at least in
part carried out using wireless communication means.

20 3. A case according to claim 1, further
comprising:

25 a connection port, attached to said first
protective material, for transferring electrical
signals between said electronic device and said
controlling interface.

30 4. A case according to claim 1, further
comprising:

at least one electrical output jack.

5. A case according to claim 4, wherein said
electrical output jack is an audio output.

30 6. A case according to claim 1, further
comprising:

an electrical input through which power is provided
to store a charge for said electronic device.

7. A case according to claim 1, wherein said
controlling interface produces numerous command
signals, including command signals that operate
functions that are not operated by command signals
produced from a controlling interface of said
electronic device.

8. A case according to claim 1, further
comprising:

at least one audio speaker that receives audio
signals from said controlling interface.
